**PRECISION ENGINEERING, INC RECEIVES
AS 9100C CERTIFICATION FROM THE
NATIONAL STANDARDS AUTHORITY OF IRELAND**

Nashua, New Hampshire June 16, 2015 – Precision Engineering Inc, from Uxbridge, MA has achieved AS 9100C certification, a globally accepted standard for companies who establish and maintain an effective Quality Management System - Aerospace e-Model. Precision Engineering sought the certification to ensure that its quality system is aligned to meet the needs of its Customers and other stakeholders. The certification was issued by NSAI Inc., a premier global provider of independent certification services.

The AS 9100C certification recognizes that the Precision Engineering Quality Management System has been implemented to support the Aerospace Industry in the fabrication and assembly of sheet metal components and assemblies, including welding and powder coating; and is gaining maturity across all of its sites. It is robust and sufficient to meet the Company's intended growth objectives and has been designed to scale for those objectives.

"Precision Engineering sought to achieve AS 9100C certification to improve our entire Quality Management System to a higher, more stringent, level of control – thereby giving our current customers added confidence in our commitment and ability to meet higher levels of excellence. Also, it allows Precision Engineering to enter a new industry sector (aerospace / defense), with the intention of expanding our customer base." said Liora Stone, President of Precision Engineering.

“The approach employed by Precision Engineering embodies management commitment by involving all levels of the organization and empowering individuals to make appropriate, data-driven decisions,” said Lisa Greenleaf, US Operations Manager at NSAI Inc. “There is a strong underlying management system that provides the necessary structure and is supported by a process-approach model that prevails throughout the manufacturing process.”

AS 9100C is often mandated to suppliers by customer requirement. More importantly, a well-planned quality management system is the underpinning for effective and efficient operations for the shared benefits of the customers, suppliers and stakeholders and the certified company itself.

“AS 9100C focuses on all aspects of the quality management system and provides a structure and tools for organizations who want to ensure that their products and services consistently meet customer’s expectations and continual improvement, says Christopher M. Morrell, Vice President of NSAI.

About Precision Engineering Inc (PEI)

Precision Engineering, Inc. is a certified woman-owned manufacturer of custom fabricated metal products (sheet metal fabrications) – including enclosures, components, bracketry, and electro-mechanical assemblies. Capabilities include laser cutting, punching, forming, hardware installation, powder coating, welding, spotwelding, graining/deburring, electro-mechanical assembly, and kitting. In addition to AS9100C, Precision Engineering is also certified to ISO 9001:2008 and ISO 14001:2004. For more information please visit our website at www.precisionengineering.com.
